

Online food delivery dataset

- **Customer Base is Highly Educated:** Over 90% of the customers are either **Graduates** (177 / 45.6%) or **Post Graduates** (174 / 44.9%). Groups like Ph.D., School level, and Uneducated make up only a tiny sliver of the demographic.
- **Male Customers Outnumber Females:** The gender breakdown shows a noticeable lean toward men, with males sitting above 200 and females around 160.
- **Customer Loyalty Drives High Sentiment:** The vast majority of responses come from **Regular** and **Frequent** customers, with brand-new customers representing a very small share. Sentiment is overwhelmingly **Positive** across every customer type, though the ratio of positive to negative reviews is fairly consistent regardless of whether someone is a regular or frequent shopper.
- **Most Families Have 3 to 5 Members:** The family size pie chart is heavily dominated by household sizes of 3, 5, and 4. Extreme sizes (1-person or 6-person households) form much smaller slices of the total.
